

3-Week Manual Testing Interview Preparation Plan - [Naveen Automation Labs]

Week 1: Fundamentals & Theory

Day 1-2: Testing Basics

- Software Testing Fundamentals
 - Testing types (Unit, Integration, System, UAT)
 - Testing levels
 - Testing principles
 - Verification vs Validation
- Shift Left Testing
 - Early testing involvement
 - Prevention over detection
 - Developer-tester collaboration
 - Test planning in requirements phase
- Shift Right Testing
 - Production monitoring
 - A/B testing
 - Feature toggles
 - User feedback analysis
 - Production testing

Day 3-4: SDLC & Test Process

- Software Development Life Cycle
- Testing Life Cycle (STLC)
- Bug Life Cycle
 - New/Open
 - Assigned
 - Fixed
 - Retested
 - Closed
 - Reopened

Day 5-7: Test Documentation

- Test Plan components
- Test Strategy
- Test Scenarios
- Test Cases
 - Practice writing test cases using templates
 - Traceability Matrix
 - RTM (Requirements Traceability Matrix)

Week 2: Advanced Concepts & Methodologies

Day 8-9: Testing Techniques

- Black Box Testing
 - Boundary Value Analysis
 - Equivalence Partitioning
 - Decision Tables
 - State Transition
- White Box Testing
 - Path Testing
 - Statement Coverage
 - Branch Coverage

Day 10-11: Agile Testing

- Agile methodology
- Scrum framework
- Sprint testing
- Test automation basics
- CI/CD basics
- DevOps integration with Shift Left/Right

Day 12-14: Test Management

- Defect Management
- Test Metrics
- Test Estimation
- Risk Analysis
- Test Environment Management

Week 3: Interview Preparation

Day 15-16: STAR Method Practice

Format your experiences using:

- Situation: Set the context
- Task: Describe the challenge
- Action: Explain your approach
- Result: Share the outcome

Top 5 Situation-Based Testing Questions with STAR Approach:

1. Production Hotfix Scenario

- Situation: Critical bug reported in production payment module
- Task: Investigate, test, and ensure fix within 2 hours
- Action:
 - Quick impact analysis

- Created focused test cases
- Performed regression testing
- Coordinated with DevOps for deployment
- Result: Bug fixed and verified within SLA, no customer impact

2. Missing Requirements Scenario

- Situation: Incomplete requirements for login functionality
- Task: Complete testing without full requirements
- Action:
 - Conducted requirement analysis sessions
 - Created assumption document
 - Developed exploratory test cases
 - Validated with stakeholders
- Result: Found 3 critical issues before development, saving sprint time

3. Test Environment Conflict

- Situation: Multiple teams needing same test environment
- Task: Manage testing for 3 features with environment constraints
- Action:
 - Created environment usage schedule
 - Implemented environment restoration plan
 - Coordinated with teams for shared usage
- Result: Completed all testing within sprint with no delays

4. Performance Testing Emergency

- Situation: Performance issues before major release
- Task: Identify and resolve performance bottlenecks
- Action:
 - Created focused performance test scenarios
 - Monitored system metrics
 - Collaborated with developers
- Result: Improved response time by 40%

5. Regression Testing Time Crunch

- Situation: Large regression suite, limited time
- Task: Complete regression testing in 2 days instead of 5
- Action:
 - Risk-based test case prioritization
 - Parallel testing execution
 - Automated critical paths
- Result: Completed critical testing on time, no major issues in release

Day 17-18: Technical Practice

- Mock interviews focusing on:
 - Test case writing exercises

- Bug reporting scenarios
- Test plan creation
- Defect lifecycle scenarios
- Database testing concepts

Day 19-21: Final Review & Mock Interviews

- Review all concepts
- Practice common interview questions
- Prepare questions for interviewer
- Review your portfolio/resume
- Practice behavioral questions

Key Tools to Learn

1. Jira
2. TestRail
3. Bugzilla/Mantis
4. SQL Basics
5. Excel (for test cases)
6. APM tools for Shift Right testing
7. CI/CD tools for Shift Left testing

Interview Tips

1. Prepare 2-3 project examples using STAR method
2. Create a testing portfolio with sample test cases
3. Practice explaining technical concepts simply
4. Review company's product before interview
5. Keep updated with testing trends
6. Document Shift Left/Right testing experience
